RV Connector Cable RVCA25

Recharge RVs & Trailers

Charge your RVs and trailers with no installation.

This invaluable cable has a standard 2-pin SAE connector on one end and a 7-way blade connector on the other end. It connects as easily as plugging a trailer to a car end during travel.

This allows solar generators to charge the batteries of motor homes and trailers directly without the hassle of configuring cables and installing extra hardware.

Replace gasoline generators with responsible solar power. Suitable for any vehicle with a 7-way towing connection, including trailers, RVs, horse trailers, mobile disaster relief vehicles, and concession or catering trailers.

Specifications

RV Connector Cable, 25'

Cable Length	7.62 m (25 feet)
Connectors	Standard 2-pin SAE and 7-Way Blade Connector (Car/Vehicle End)
